Sustainable entrepreneurship

Heras Mobile Fencing & Security invests a lot of energy in the climate change issue. As a market leader in temporary security, Heras shoulders its own responsibility. We do this for a better climate and for a safe future.

Sustainable entrepreneurship is not optional. We want to genuinely make a contribution to a more sustainable environment. We also wish to respond to a market that demands climate-conscious solutions. This requires sustainable procurement, reduction of CO2 emissions, and the recycling of materials.

In short: sustainable entrepreneurship is actually the most normal thing in the world for Heras Mobile Fencing & Security. Which does not mean that we lapse into automatism. Sustainability requires smart solutions, and demands a cleaner process. This leaflet provides some information about what we are working on currently.

Sustainability in action

For us at Heras Mobile Fencing & Security, sustainability is not just about good intentions or maintaining reams and reams of notes. Instead, we implement it in practice. As these examples show:

- Development of green/sustainable construction fences (ungalvanised), and the more environmentally friendly “LiFe” product concept.
- Energy savings of 20% through use of LED lighting at the production site in Belgium.
- Energy neutral offices (geothermal heating/no air conditioning/green energy).
- Fixed transporters will only drive the most fuel-efficient trucks from now on.
- Support to local green projects; recycling of scrap metal fences.
- Plastic block: 100% sustainable product.
- Workwear that fulfils SA8000 requirements (no child labour, transparent production).
- Noise Control Barrier: special fence fabrics that reduce noise by 20 dB(A). With a focus on employees and the area surrounding the construction site. In addition: the filling consists of fibreglass fibres, 99 per cent of which is made of recycled plastic bottles.
- Our aim is to reduce paper consumption by 20% in 2017
